

Life Science

Overview

In an industry as constantly and rapidly changing as that of life sciences, companies must find ways to constantly refresh their financial strategies in order to bridge the gap between business and science. From startups to multinational companies, the drive for invention brings considerable challenges that must be addressed in order to meet expectations from investors and clients.

BPM's Life Science group is committed to providing professional services to help diagnostic, therapeutic and medical device companies adapt in today's volatile business climate. We understand the need to manage for immediate and long-term value in the face of lengthy, high-cost research and development cycles, government approvals, and difficult clinical trials, each of which significantly impact a company's financial position.

With years of working with both public and private life sciences companies, we have the technical experience needed to provide world class service. And with our "one-stop" accounting services, you can turn to us for all your needs, from stock options accounting to revenue recognition to transfer pricing.

Areas we serve:

- Biotech & Pharma
- Medical Devices Equipment / Products
- Life Science Research and Lab Services
- Healthcare / Hospitals
- MedTech
