
The Gentle Art of Password Management

07.24.19

Managing a multitude of passwords has become a painful, time-consuming task for many people, and a full time job for computer systems administrators. Join BPM's InfoSec Assessment Partner, David Trepp, as he helps guide you through the tangled jungle of password complexity, length, reuse, change, hacking, cracking, guessing, and other issues. David will provide a clear explanation of what makes a password weak or strong, show examples of how passwords are defeated, and leave you with key takeaways for simplifying and securing your passwords.

Date and Time:

Wednesday, July 24, 2019
10:00 am - 11:00 am PDT

Location:

Online webinar

*The live program is eligible for CPE credit.

BPM's Information Security Assessment Services Group understands how to balance information security and business needs. The Firm performs a variety of tests and reviews, including the Comprehensive Penetration Test and Information Security Program Review, to identify vulnerabilities in a client's IT infrastructure, allowing companies to make well-educated decisions on where to best allocate resources.
