
IT Assurance

Overview

BPM's Information Technology Audit and Compliance (IT Assurance) Group assists clients in a wide variety of industries by assessing, managing and amending information technology risks within their organization. Our team delivers the resources, expertise and global capability of a Big Four accounting firm together with the responsiveness and accessibility of a local partner. The team can be distinguished from those in other firms by its commitment to working with and guiding emerging and mid-cap businesses through complex processes in order to meet organizational goals.

All organizational data originates from, travels to, and is stored in information systems. Because of this, assurance services must include IT audit, risk analysis, information security practices and more. BPM's IT Assurance team works closely with the BPM Assurance team to deliver a seamless service experience.

Our hand-selected team of professionals hold public accounting and industry credentials, including the CISA and CPA. With an emphasis on these and other certifications, BPM's team is well positioned to help you reach your organizational goals.
