

IT Security Advisory

Overview

\$8.19 million. That's the average cost of a data breach for U.S. companies.¹

Cybersecurity peace of mind may not come free, but the costs of not being prepared can far outweigh a responsible investment in information security. That's where BPM comes in. With BPM's IT Security Advisory practice, you get true security experts who help you identify threats, minimize liabilities, prepare for audits and more — all at a competitive rate that you can feel good about.

Get expert, cost-effective security monitoring — 24/7, 365 days a year.

Your Security Operations Center (SOC) is your business's front-line defense against hackers and the insider threat. It's more than just a best practice; continuous security monitoring is mandated under many industry or government regulations.

Getting a SOC up and running on your own, however, can be overwhelming. And the talent required to oversee the center can be hard to find, or else prohibitively expensive.

BPM has the talent and the resources you need to implement and operate a state-of-the-art SOC. Our innovative, fully-managed SOC-as-a-Service (SOCaaS) offerings allow you to offload a major burden from your in-house IT team. Even better, the volume and domain specificity of our business allow us to provide these services more efficiently than most in-house teams can, and we pass that efficiency along to you in the form of more savings.

Proceed through your security audits with ease and with confidence.

Audits can be expensive, but the real cost is failing them. A failed audit can mean business disruption, a loss of customer confidence and even lawsuits, depending on the industry and type of audit. That's not including the cost of conducting and preparing for another audit to re-establish compliance.

Many businesses enter government or industry mandated security audits without fully understanding the requirements of the audits, or the seriousness of them. BPM's IT Security Advisory practice guides organizations of all sizes through the entire audit process, from the initial announcement or notification up to and through the audit itself. Your trusted security advocates and advisors, and our experts help organizations understand audit requirements, create strategies to pass the audit, and design and implement plans to fortify your information security according to relevant regulations.

We take our role as advisers seriously. We leverage our deep industry expertise to help you make informed judgments and predictions about concerning costs, vendors, level of service and other factors that non-specialists may not be familiar with, so there are no surprises along the way. Our duty is to your business, first and foremost, and we'll never try to sell you anything we're not 100% convinced your organization needs.

Tools and expertise to support businesses of any size.

BPM's advantage is our people. Our IT Security & Compliance leaders bring with them decades of in-house IT and consulting experience, while each of our consultants and staff come to us both highly qualified and carefully vetted to ensure they can resolve your security needs. Together, we understand what today's businesses need from a managed security provider, and we have the current knowledge that can only come from being out there in the trenches of Infosec every single day.

Our practice is fully equipped to serve organizations of any size, from multinational corporations to small or medium-sized businesses. No matter the size of your business or the scope of services you require, you'll always receive our signature fast, friendly, professional service.

All that allows us to provide a wide variety of consulting and managed security services, including:

- FedRAMP Gap Analysis and Preparation
- ISO 270xx Gap Analysis, Preparation and Assessment
- GDPR Gap Analysis, Preparation and Assessment

-
- SSAE 18 SOC 2 Preparation
 - SOC-as-a-Service
 - Risk Assessments
 - InfoSec Awareness Education and Trainings

And rest assured, we can scale with you as your business grows.

Keep your organization lean and efficient, and let BPM handle your information security needs. Contact the IT Security Advisory group today to find out how we can help.
